LinkedIn: Ulul Nurona Bhakti
South Jakarta · Indonesia

Software engineer from Politeknik Jambi who builds internal systems end to end — database, API, and the interface on top. Background in system analysis: I start by mapping how people really work, then ship software they keep using. Currently building the internal ERP at PT Aguna Satya Mulya, an ICT infrastructure company.

EXPERIENCE

Software Engineer & System Analyst · PT Aguna Satya Mulya, South Jakarta — Sep 2026 — Present

- Interview users across Sales, Project, Finance, Warehouse, Vendor Management, HR, and the board to map how work really flows.
- Analyse business processes and write the BRD — requirements, user roles, approval flows, and acceptance criteria.
- Design the data model and screens, then build the internal ERP end to end (Laravel 12, MySQL, REST API, React, VPS).
- Run functional and user-acceptance testing per module, fix findings, and roll out patches to production.
- Lead implementation: onboarding, data migration from spreadsheets, and post-go-live support; ship Waspang Mobile for field supervisors.
- Built MyRep Document Closing (Laravel, React, MySQL, Claude vision) to track FTTH closing documents, photos, and redline BoQ per cluster.

Intern — Business Control & Development, Vendor Management · PT Aguna Satya Mulya — Apr — Aug 2026

- Built the first ERP modules so vendor and procurement data no longer lived in separate spreadsheets; modelled role-based PNL approvals with an audit trail.
- Built an AI prompt scheduler (Node.js, Playwright, PostgreSQL) that runs recurring reports and sends results to Telegram.
- Redesigned and published agunasatyamulya.co.id, including an interactive project-coverage map.

System Analyst Intern · INOBI, Jambi — 2025

- Turned business processes into requirements, flowcharts, and data models; bridged users and developers during reviews and testing.

Head of Association · HIMAPEL (Software Engineering Students), Politeknik Jambi — 2023 — 2025

- Led the 2024/2025 board across five divisions; oversaw national webinars on Cyber Security and Artificial Intelligence (2024).

SELECTED PROJECTS

ORMAWA Decision Support System (thesis)

- Laravel + MySQL; ranks work-programme proposals of 10 student organisations with the SAW method (4 weighted criteria) and a 3-step approval flow.

Wholesale Grocery POS & Bookkeeping

- Cashier, stock, receivables, P&L and balance sheet, built on a 17-component design system.

Aguna Internal ERP

- Project, procurement, warehouse, finance, and HR in one system with role-based workspaces and a live P&L dashboard.

AI Prompt Scheduler

- Cron-scheduled prompts per division with execution history and Telegram delivery.

SKILLS

Backend	Laravel, PHP, Node.js, REST API
Frontend	React, JavaScript, HTML, CSS, Blade
Data	MySQL, PostgreSQL, SQL
Tools	Git, VPS / Linux, Figma, Postman
Other	System analysis, public speaking / MC, leadership

EDUCATION

D4 Software Engineering Technology — 2022 — 2026
Politeknik Jambi

AWARDS & CERTIFICATIONS

- 2nd place — International UI/UX Design Competition, POLJAM Ideacraft 2025
- 3rd place — UI/UX Mobile App, national, Politeknik Negeri Semarang 2024
- BNSP: Junior Web Developer (2023) · Junior Network Administrator (2023, 2025)
- Digital Talent Scholarship (Kominfo): Junior Web Developer, 90 h
- Dicoding: AI, Data Science, SQL, Python fundamentals (2024)
- Debater — National University Debating Championship 2023
- English-language MC — 17th graduation, Politeknik Jambi 2024
